## Educational Projects

---

### Simple Banking System

Learned how to write sql statements in java, how to make connection with database, felt the difference between prepared statements and statements. Saw how Luhn algorithm can help us avoid mistakes and used it in my project.

### Code sharing platforms

There is a lot of collaboration in programming: many projects require sharing your code with other developers. Using open web resources such as Pastebin is not always an option. In this project, I created my own secure version of a code-sharing platform. Shared code will have restricted time or restricted number of views. I touched on some basic topics in Web-programming such as HTML, CSS, and JS.

### Recipes

Created a multi-user web service with Spring Boot that allows storing, retrieving, updating, and deleting recipes. Used Spring Boot, learned about JSON, REST API, Spring Boot Security, H2 database, LocalDateTime, Project Lombok, and other concepts useful for the backend.
