Summary

https://inspiredsamat.github.io/

Experience

Dara Solutions | Almaty, Almaty
Java Developer | 06/2023 - 07/2023

- Maintained and updated existing Java codebase, ensuring the seamless integration of new features and enhancements.
- Assisted the frontend team with small problem-solving tasks in Angular, showcasing versatility and a willingness to contribute beyond my primary expertise.
- Contributed to the design and implementation of RESTful APIs using Spring Boot, enabling efficient communication between different application modules.

equrylys.kz | Almaty, Almaty
Java backend developer | 01/2023 - 06/2023

Implemented simple testing strategies to maintain code integrity and minimize the occurrence of bugs and issues.

Skills

Java, SQL, Spring Boot, HTML5, CSS3, Git basic commands, REST, English Upper-Intermediate, Thymeleaf, Docker, AngularJS

Education

Suleyman Demirel University | Almaty
Computer Science | 05/2024
3.28 / 4.0

Certificates

University of Michigan: Building Web Applications in PHP, Hackerrank: Java Basic, freeCodeCamp: Javascript Algorithms and Data Structures

Educational Projects

Simple Banking System

Learned how to write sql statements in java, how to make connection with database, felt the difference between prepared statements and statements. Saw how Luhn algorithm can help us avoid mistakes and used it in my project.

Code sharing platforms

There is a lot of collaboration in programming: many projects require sharing your code with other developers. Using open web resources such as Pastebin is not always an option. In this project, I created my own secure version of a code-sharing platform. Shared code will have restricted time or restricted number of views. I touched on some basic topics in Web-programming such as HTML, CSS, and JS.

Recipes

Created a multi-user web service with Spring Boot that allows storing, retrieving, updating, and deleting recipes. Used Spring Boot, learned about JSON, REST API, Spring Boot Security, H2 database, LocalDateTime, Project Lombok, and other concepts useful for the backend.
